EXECUTIVE SUMMARY

- This report analyzes data from a 2019 Overflow developer survey and uses API and web scraping to determine what the technology trends are today and in the future.
- To do so, data was first cleaned, analyzed, and several conclusions were drawn from charts, tables, and dashboards.
- It was determined that the most popular languages among respondents are JavaScript and Python and the most in-demand database is PostgreSQL. It also found that the age of IT workers is under forty years old.
- This report presents the methodology used, data graphs and dashboards, as well as the conclusions and implications reached with the data analysis.
- Finally, graphs related to the age of respondents, trends in the most in-demand database, the ten most in-demand programming languages today and in the future, and the ten most in-demand databases now and in the coming years are presented.

INTRODUCTION

- This presentation is about a data analysis of current and projected trends in the use of changing technologies in programming languages, databases, and the most popular IDEs.
- The following questions were addressed when analyzing the data:
 - 1. What are the most popular programming languages?
 -
 - 2. What are the most in-demand database knowledge?
 -
 - 3. What are the most popular IDEs?
- This report is for IT executives, professionals and anyone interested in current and projected trends in technologies. With this report the reader will have an overview of the trends that mark the use of these technologies.

METHODOLOGY

- For this report, the following procedure was carried out:
- 1. Used the GitHub Jobs API in python to determine the number of jobs for different technologies and locations.
- 2. To obtain the names of the programming languages and the average annual salary, the IBM website was scraped.
- 3. Downloaded and saved the 2019 Stack Overflow Developer Survey dataset.
- 4. With this data set, the data was cleaned and analyzed using Python.
- 5. Created visualizations (tables, graphs and dashboards) of the developers' data set with the help of python and Looker Studio.
- 6. With all the data gathered, the presentation was made.

RESULTS

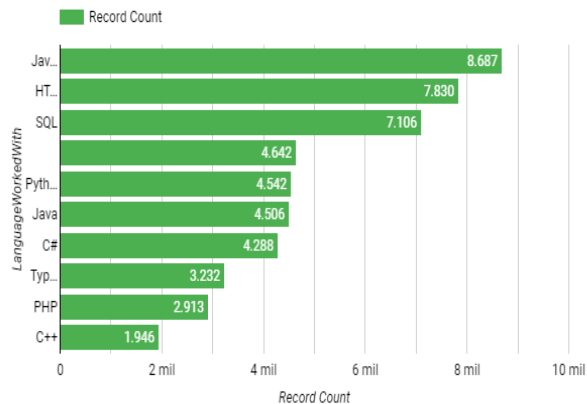

IBM Developer

SKILLS NETWORK 

PROGRAMMING LANGUAGE TRENDS

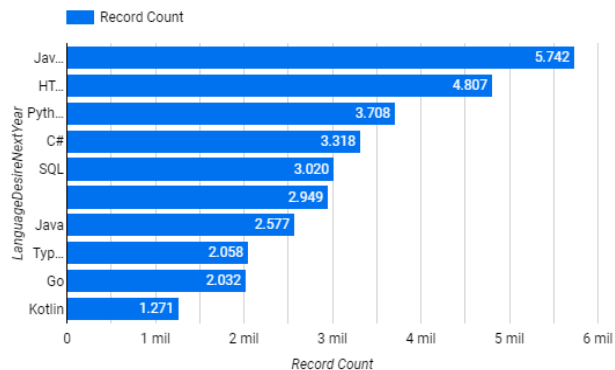

Current Year

Top 10 programming languages for the current year

Next Year

Top 10 programming languages for the next year

IBM Developer

SKILLS NETWORK 

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- Javascript, HTML/CSS, SQL, Shell, Python, Java, C#, TypeScript, PHP, C++ are the top ten programming languages for the current year.
- Javascript, HTML/CSS, Python, SQL, Typescript, Shell, C#, Java, Go and Kotlin are the top ten languages for the next and following years.
- Python is more in demand than SQL next year. The same thing happens with C# with respect to Shell.

Implications

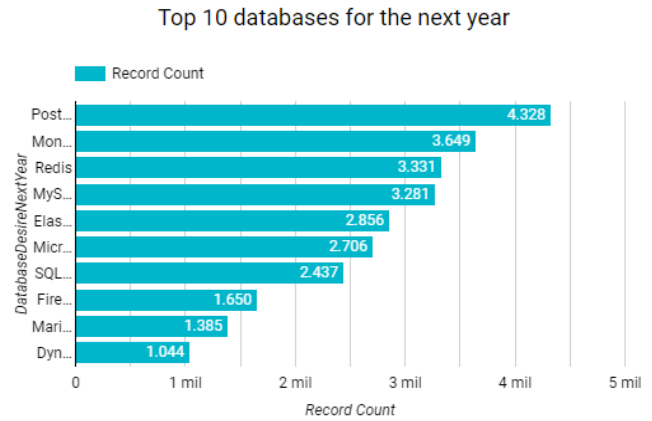

- Python's increase in demand may overtake JavaScript in the future.
- JavaScript, Python, HTML/CSS, and SQL are consistently in demand.
- Web development remains in high demand.

DATABASE TRENDS

Current Year

Next Year

IBM Developer

SKILLS NETWORK 

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- MySQL, Microsoft SQL Server, Postgre SQL, SQLite, MongoDB, Redis, Elasticsearch, MariaDB, Oracle and Firebase are the top ten most used databases at the moment.
- However, Postgre SQL, MongoDB, Redis, MySQL, and Elasticsearch are expected to become the most popular databases in the future.
- PostgreSQL will become the most popular foundation in the coming years.

Implications

- PostgreSQL and MongoDB are the most consistently in-demand databases increasing in popularity in the coming years.
- There is a tendency to prefer open source databases.
- Demand is volatile.

DISCUSSION

- 
- New technologies constantly emerge that generate changes in demand.
 - The IT industry needs to diversify to eliminate the gender gap.

IBM Developer

SKILLS NETWORK 

OVERALL FINDINGS & IMPLICATIONS

Findings

- Web development languages are the most popular and in-demand tools in the IT field today.
- The technology sector is mainly filled with young people under 40 years old.
- Trends and demands fluctuate according to new technologies.

Implications

- It is important for data professionals to develop competencies in NoSQL in addition to SQL databases.
- Web development remains a very lucrative skill as there is a lot of demand.
- Less developed countries need more access to technology training and education.

CONCLUSION

- The most popular programming languages are JavaScript and Python.
- The most popular database is PostgreSQL.
- The IT industry needs to diversify.
- The technology field is filled with the young population under forty years old.
